

## Why Hydroseeding?

Hydroseeding applies grass seed, fiber mulch, and fertilizer in one evenly mixed application.

This creates ideal conditions for:

- ✓ Faster germination
- ✓ Even grass coverage
- ✓ Strong root development
- ✓ Reduced erosion and washout

Hydroseeding is well suited for:

- New lawns and restorations
- Post-excavation or utility work
- Drainage and grading repairs
- Slopes and hard-to-seed areas
- Native grass & wildflower plots
- Pasture seeding

## Why Cardinal Earthworks?

- ✓ Owner-operated and locally based
- ✓ Residential-focused, small commercial welcome
- ✓ Compact equipment suited for tight access areas
- ✓ Flexible services tailored to each site
- ✓ Optional soil preparation and grading services are available to improve results where needed.

## Hydroseeding

a smarter way to establish a lawn

Hydroseeding is a professional alternative to sod and traditional seed & straw

For residential and small commercial properties

**Cardinal Earthworks**

A division of Cardinal Home Solutions LLC

## The Best Way to Establish a New Lawn: Hydroseeding

- ✓ Best balance of cost and performance
- ✓ Costs significantly less than sod
- ✓ Establishes stronger roots than seed & straw
- ✓ Uniform coverage with reduced washout
- ✓ Ideal for large areas, slopes, and restorations
- ✓ Most popular choice for residential and small commercial projects

### Other Options

#### Seed & Straw

- Lowest initial cost
- Uneven results
- High erosion risk
- Often requires reseeded

#### Sod

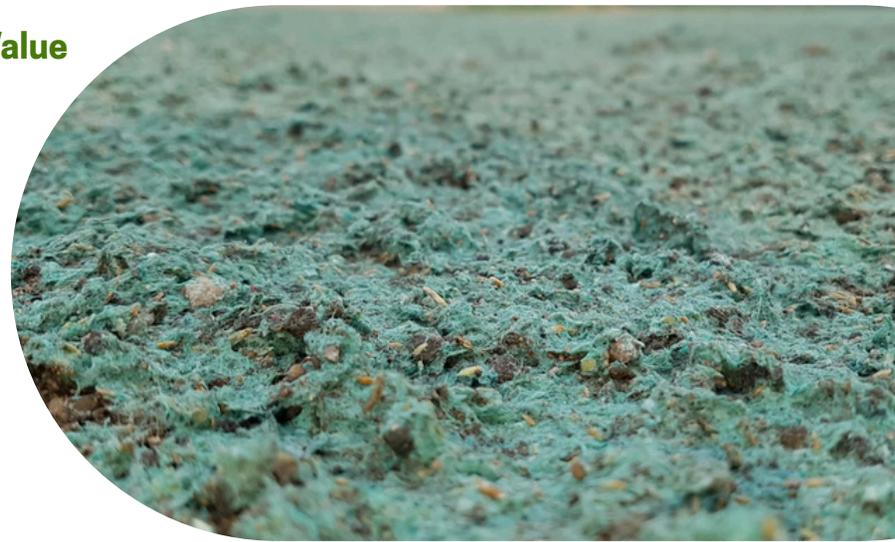

- Instant appearance
- Highest upfront cost
- Shallow root system
- Seams can dry out or fail

**Hydroseeding delivers the most reliable results for the cost.**

## Hydroseeding — Best Value

### Why it's the smart choice:

- ✓ Costs 40–60% less than sod
- ✓ Produces a strong, deep-rooted lawn
- ✓ Uniform coverage with minimal washout
- ✓ Perfect for residential & small commercial sites

**Hydroseeding gives you lasting results without breaking the bank.**

### Other Options

#### Sod

- Instant lawn but highest cost
- Shallow roots, can dry out or lift
- Requires heavy watering to survive

#### Seed & Straw

- Cheapest upfront, but patchy results common
- High risk of erosion
- Often requires reseeded or extra maintenance

**Hydroseeding** is the clear choice for cost, performance, and long-term results - the smart solution for a beautiful lawn.

### What to Expect

- Germination typically begins in 7–14 days
- First mowing usually at 4–6 weeks
- Proper watering is essential
- Weather and soil conditions affect timing

### Our Process

1. Site evaluation
2. Optional soil prep or grading (as needed)
3. Even hydroseed application
4. Clear watering instructions provided

Designed to integrate with residential and small commercial projects.
